2023 Print Art Guidelines

Print Ads Artwork

Overview / File Formats

We accept high resolution CMYK PDF files, press quality setting, with all fonts embedded. We can work with EPS and Tiff files as well. JPEGs are normally low resolution and will not print well and are not recommended. Any file that is sent as RGB file will be returned to sender and asked to be converted to CMYK.

Scan Formats and Resolution

All scans you wish to use should be converted into CMYK or Grayscale mode prior to placement in your layout program. Resolution, enlargement and line screen all work together in determining how well a scan will print. Resolution is the number of pixels per linear inch in the final printed image, if the scan is placed at 100%. If a scan is enlarged in an art program (Quark, Illustrator, InDesign, etc.), the number of pixels per inch is reduced and the scan quality will also be reduced. The opposite is true if the scan is reduced, when placed at less than 100% of its actual size the number of pixels per inch increases. 300 dpi is acceptable for photo scans and 600 dpi or greater is recommended for line scans. Avoid using graphics and logo's downloaded from the internet as these are poor quality, usually only 72 dpi, which can cause a "halo" of dirt around them when printed.

Color

- Include all Process colors with the file
- Remove all unused color from the file. Only the colors printing should be used in the art file and visible in the swatches palette.
- **Please be sure to define all colors as process colors (CMYK)** Your monitor will usually not display accurate colors and should not be trusted for precise color control and final color decisions. Monitors and color printers are all calibrated differently and do not represent the effects that dot gain may have on an image.

CMYK Guidelines

If you expect a true yellow use 100% yellow with no additives. For example: Do not mix 5% cyan with 100% yellow the end result will be a light lime yellow. If you expect a true red use 100% Magenta and 100% Yellow with no additives. Adding Cyan or Black will cause it to be darker or muddier looking.

Make sure your black text is not on all 4 plates. Keep in mind that custom colors that are converted to CMYK do not always maintain their original brilliance or hue.

Type

All text should be created in vector format, this includes Illustrator, QuarkXPress, and Freehand. Vector artwork consists of lines and curves that form shapes stored as a series of mathematical instructions. Vector based graphics and text will have smooth edges. Text created in raster-based programs like Adobe Photoshop or other raster based programs will have jagged, rastered edges, making smaller text difficult to read. All fonts must be embedded in the high resolution, press quality, PDF file.

The smallest typeface recommended is:

- 6 pt when typeface is solid black
- 7 pt when typeface is in a color
- 7 pt when typeface is a white reverse on black
- 7 pt when typeface is reversed on any colored background

Any type below these recommendations may not be legible when printed. We do NOT recommend using condensed or serifed fonts for reversed-out text, as the thinner portions of the letters will have a tendency to fill in. Watch for any areas of the text that are less than .01 of an inch in thickness as these may not reproduce well.

Gradients

The smallest dot that can be used for our printing plates may be as small as 5% but may gain as much as 20% on the press due to the nature of the plate material and the printing process. Please keep screens at 5% or more. Screens over 85% may appear as solid colors due to press dot gain.

Complying with the afore mentioned guidelines will help to ensure that supplied art can be processed timely and will reproduce as well as possible.

Van Zandt Newspapers

EXPLORE

A guide to the places, people and history in and around Van Zandt County

Don't miss your opportunity to be a part of our **Award-Winning EXPLORE Magazine!**

This highly anticipated LOCAL GUIDE provides readers with an overview of our county's history, communities, events, destinations and much more.

Over 5,000 copies of EXPLORE will be available in area hotels, over 100 businesses and high-traffic visitor areas throughout the county for an entire year. In addition, copies of EXPLORE are sent to neighboring chambers and tourism centers as well as Texas travel centers on our northern and eastern borders. The special publication will also be a one time newspaper insert reaching our readers.

Digital editions of EXPLORE will be available on all Van Zandt Newspaper websites for 12 months at no additional charge.

THE LOCAL GUIDE IN VAN ZANDT COUNTY!
